

Select Explain Approve

NCC and alternate-supplier requests

Make the supplier choice clear from selection through approval.

1

Start with NCC

Confirm the preferred offer

2

Explain an exception

Record a meaningful justification

3

Review and approve

Check need supplier and authority

The screenshot shows a web form for creating a request. At the top, there are tabs for 'DELIVERY SITE' (with a 'Select site...' button) and 'SUPPLIER' (showing 'NCC Apparel Pty Ltd'). Below these are several input fields: 'DELIVERY SITE *' with a dropdown menu, 'REQUEST DATE *' with a date picker set to '06/10/2026', 'REASON FOR REQUEST *' with buttons for 'Depletion', 'New Customer', and 'Other', and 'ADDITIONAL COMMENTS' with a text area. There are also fields for 'SUPPLIER *' (showing 'NCC Apparel Pty Ltd' as the 'Default Preferred' supplier), 'CUSTOMER NAME' (with an example 'E.g. Hilton Hotel, Crown Casino, Civeo'), and 'CUSTOMER CATEGORY' (with icons for 'Accommodation', 'Hotels, Resorts & Hospitality', and others). A 'NEED-BY DATE (ALL ITEMS)' field is also present with a date picker and a 'QUICK' dropdown showing '+7d', '+14d', and '+30d' options.

WHAT CHANGED / WHERE TO FIND IT / HOW TO USE IT

Discover the new feature, find it in the app and follow the associated workflow.

NCC and alternate-supplier requests

Make the supplier choice clear from selection through approval.

What is new

NCC is presented as the preferred supplier. Alternate offers and requests carry visible flags, with the business justification recorded in **Additional Comments** for approval review.

Where you will encounter it

Supplier Stock → Order NCC or Order Alt → Create Request. The supplier field shows the preference or caution; the request detail screen carries the alternate flag and comments into approval.

How it fits your workflow

Choose the offer → confirm request and cart details → explain any supplier exception → **Submit Request** → approver reviews the need, supplier choice and authority.

Section	Page
NCC preference in Create Request	3
Check the cart and submit	4
Explain an alternate supplier	5
Review the request as an approver	6
Supplier-choice checklist	7

Key action

An alternate flag or a generic stored reason is not a complete justification. Record the actual supply constraint and business case in comments.

NCC preference in Create Request

The preferred-supplier controls continue from the directory into request creation. Order NCC passes the selected product and supplier into Create Request.

Where in the app

Supplier Stock → Order NCC → Create Request; the supplier field shows Default Preferred.

The request header shows supplier preference, delivery site, dates, category and comments.

- 1 Confirm the supplier**
Check NCC Apparel and the Default Preferred badge. A fresh request normally defaults to NCC unless a supplier was passed in or restored from a draft.
- 2 Select the delivery site**
Choose the receiving site. Users assigned to multiple sites must make an explicit selection.
- 3 Describe the requirement**
Enter the customer or requirement name, select its category and choose Depletion, New Customer or Other.
- 4 Set the need by date**
Enter the actual required date. Apply it to existing cart lines where needed; a header default does not replace every existing line date.
- 5 Add useful comments**
State delivery instructions and any information the approver needs.

Required information

Use the actual receiving site, customer or requirement, reason, quantity and required date. Confirm each line before submitting.

From stock selection to a submitted request

The directory handover pre-fills the offer. Confirm the quantity and value before submission; the reservation begins only after approval.

Where in the app

Create Request → expanded Order Summary → Submit Request.

Order Summary

THT SCRUB PANT - M GREEN
HSPG02

PRICE 5.56
120 x \$5.56

Subtotal (Ex GST) \$667.20
GST (10%) \$66.72

Order Total (Inc GST) \$733.92
SAP Concur Parity Total

Submit Request →

The expanded Order Summary confirms quantity 120 and the recalculated totals.

01 Confirm the cart line

Check HSPG02, the description and the supplier-specific price.

02 Set the quantity to 120

Type 120 in the quantity field, then press Enter or click outside the field so the totals recalculate. Check any carton or pack requirements.

03 Check the line date

Confirm the need-by date on the cart line, including after a bulk date change.

04 Verify the amounts

For NCC HSPG02 at AUD 5.56, 120 units total AUD 667.20 excluding GST. At 10% GST, tax is AUD 66.72 and the total is AUD 733.92.

05 Submit or retain a draft

Choose **Submit Request** when the details are ready. **Save Draft** preserves work for later; a draft does not hold stock.

06 Check the submitted record

Open the resulting request and confirm its reference and pending approval status. Do not submit the same requirement again.

Expected result

The request is awaiting approval. The 48-hour reservation window starts when approval is recorded, rather than while you are building the cart.

Alternate suppliers and justification

Alternate offers are now clearly distinguished from NCC. The choice is flagged in Create Request and on the request presented for approval.

Where in the app

Supplier Stock → Order Alt → Create Request → supplier field and Additional Comments.

The screenshot shows the 'Create Request' form in the ProcureFlow app. The 'DELIVERY SITE' is set to 'Select site...'. The 'SUPPLIER' is 'Simba Global - Healthcare' with a yellow caution icon. The 'REQUEST DATE' is '06/10/2026'. The 'REASON FOR REQUEST' has buttons for 'Depletion', 'New Customer', and 'Other'. The 'NEED-BY DATE (ALL ITEMS)' is 'dd/mm/yyyy'. The 'CUSTOMER NAME' is 'E.g. Hilton Hotel, Crown Casino, Civeo'. The 'CUSTOMER CATEGORY' is 'Accommodation' with a sub-label 'Hotels, Resorts & Hospitality'. The 'ADDITIONAL COMMENTS' field contains the text 'Any special delivery instructions?'.

The caution icon flags the alternate supplier; the comments provide the business explanation.

- 1 Choose Order Alt**
Select the alternate offer, then verify the supplier in Create Request. Switching suppliers clears the existing cart; review or re-add the required items.
- 2 Record the exception in comments**
Explain why NCC cannot meet the requirement and why the selected alternate is suitable.
- 3 Confirm price and supply**
Check the supplier code, specification, pack, quantity, lead time and total.
- 4 Submit for review**
The request is marked Alternate Non-NCC for the approver. Follow the configured approval workflow for the designated approver.

What the justification must cover

Record the actual supply constraint, why the alternate product is suitable, its confirmed lead time, quantity, price and value. Provide enough information for the designated approver to assess the exception.

The current screen can store a generic alternate reason automatically. Put the meaningful justification in Additional Comments and follow the configured approval workflow. Use the visible Order Alt action to begin the exception request.

What approvers will now see

The supplier exception remains visible at approval. Review **Alternate Non-NCC** and the comments alongside the requirement, stock position and value.

Where in the app

Approval queue or request list → open the pending request → supplier flag and comments.

POR-202609-000065 Pending Concur PO Accommodation

9/30/2026 by Julie Nguyen

Stock Reserved — Awaiting Concur PO # Concur PR #10159

Purchase Request #10159 has been lodged in SAP Concur. Supplier stock remains reserved pending final Concur Purchase Order issuance.

"Quest Joondalup – NEW B – A – Oct – Simba - PER"

Requested Approved Req. Logged In Concur Full Complete

The saved request retains the supplier exception and comments. Decision controls appear when you are the assigned approver for a pending request.

1 Open the pending request

Use the approval queue or request list to open the pending request assigned to you.

3 Review supplier exceptions

Look for Alternate Non-NCC and read the comments. Confirm that the reason and the proposed supply meet the requirement; follow the configured approval workflow.

5 Record a decision

Select **Approve** or **Reject** as appropriate. If information needs correction, resolve it with the requester before approval.

2 Check the requirement

Review site, customer, requested quantities, need-by dates, prices and total value.

4 Check stock and authority

Review the current directory balance and any supply uncertainty. Confirm the request sits within your approval authority and any separation-of-duties requirements.

6 Verify the handover

After approval, check that the request moves to its Concur entry stage and the reservation banner appears. The requester should now create and link the PR.

Expected result

The approval is recorded in the request history and the 48-hour clock begins. Approving within ProcureFlow does not itself lodge the PR in Concur or place an order with the supplier.

Supplier-choice checklist

Check the supplier decision before it becomes an approved allocation.

Requester checklist

Correct supplier and product; correct receiving site; appropriate requirement and reason; quantities and packs checked; current price and total checked; correct line dates; meaningful comments for the approver.

Supplier exception review

Record the actual supply constraint, why the alternate product is suitable, its confirmed lead time, quantity, price and value. Provide enough information for the designated approver to assess the exception.

Approver checklist

Confirm the requirement, stock and supply timing, supplier exception, price, total and approval authority. Resolve unclear comments before approving. Verify that the saved decision appears on the request.

Handover after approval

Approval begins the 48-hour reservation window. The requester or authorised Concur user creates the real PR and links its number using **Enter Request #**. A linked PR preserves the hold while the issued PO is awaited; later use **Link Concur PO** → **Sync & Activate**.

Quick check

Does a saved draft hold stock? No. The holding window starts when approval is recorded.
