

Approve Link PR Protect

Stock reservations and Concur handover

Protect approved allocations and keep the purchasing handover moving.

1

Approve the request

The initial 48-hour clock begins

2

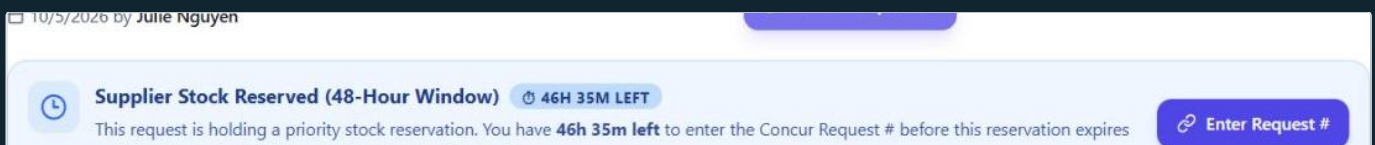

Link the real Concur PR

Preserve the approved reservation

3

Link the issued PO

Activate and track delivery

WHAT CHANGED / WHERE TO FIND IT / HOW TO USE IT

Discover the new feature, find it in the app and follow the associated workflow.

Stock reservations and Concur handover

Protect approved allocations and keep the purchasing handover moving.

What is new

Approval starts a visible 48-hour holding window. Linking the real Concur PR protects the reservation while awaiting the PO. The banner shows the stage and directs the next action.

Where you will encounter it

Approved request → request detail → reservation banner. Use **Enter Request #** for the PR, then **Link Concur PO** when the PO is issued.

How it fits your workflow

Approve → countdown begins → create and link the real PR within 48 hours → protected hold awaiting PO → link issued PO → Active → record actual receipts.

Section	Page
Read the reservation countdown	3
Link the Concur PR	4
Link the issued Concur PO	5
Reservation checks	6

Key action

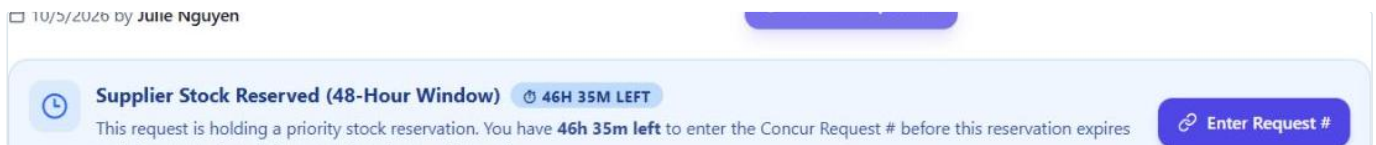

The Concur PR protects the hold. Do not wait for the final PO before recording the PR.

Reservation countdown after approval

Approved requests now show a visible holding window. The countdown becomes more urgent as the deadline approaches, directing attention to PR entry.

Where in the app

Approved request → request detail → **Supplier Stock** Reserved banner.

The current banner explicitly asks for the Concur Request number before expiry.

Indicator	Meaning	Action
24 hours or more	Normal reservation window.	Create and link the Concur PR promptly.
Fewer than 24 hours	Warning tier.	Prioritise outstanding PR entry.
Fewer than 12 hours	Critical tier.	Act immediately; escalate any blocker.
PR reference shown	The PR is linked and the reservation is protected while awaiting the PO.	Follow Concur progress and link the issued PO.

How the deadline works

The initial deadline is 48 elapsed hours after approval. Link the actual PR within that window; its reservation then remains protected while the issued PO is awaited.

Expected result

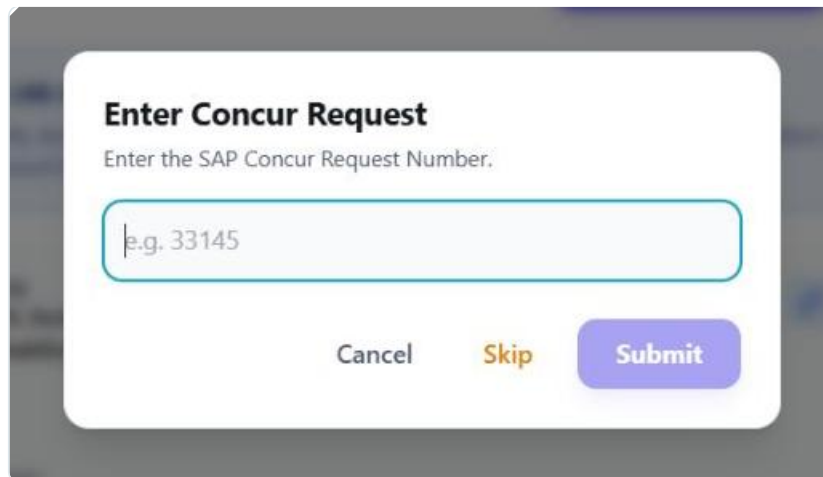

The countdown shows the remaining time for PR entry. Enter the real Concur PR number promptly. Skip does not complete the handover or restart the approval clock.

PR linking protects the reservation

A linked Concur PR now preserves the stock reservation while the PO is awaited. Link the real PR within the initial 48-hour window.

Where in the app

Request detail → **Enter Request #** → Enter Concur Request; verify the updated protection banner.

Enter Concur Request is the PR-number entry dialog.

- 1 Open the approved request**
Check the ProcureFlow reference and the supplier before linking anything.
- 2 Prepare the Concur PR**
Use Details for Concur if available to review the request information, then complete the PR in Concur.
- 3 Select Enter Request number**
On the request detail screen, choose **Enter Request #**.
- 4 Enter the issued PR reference**
Copy the actual Concur Request number from the issued PR.
- 5 Select Submit**
Save the number and wait for the request to update.
- 6 Verify protection**
Check the Concur Request field and the banner. It should show the PR reference and state that stock remains reserved pending PO issuance.

 **Stock Reserved — Awaiting Concur PO #** Concur PR #10159

Purchase Request #10159 has been lodged in SAP Concur. Supplier stock remains reserved pending final Concur Purchase Order issuance.

 [Link Concur PO #](#)

The linked-PR banner shows the protected hold and the next action: Link Concur PO.

Expected result

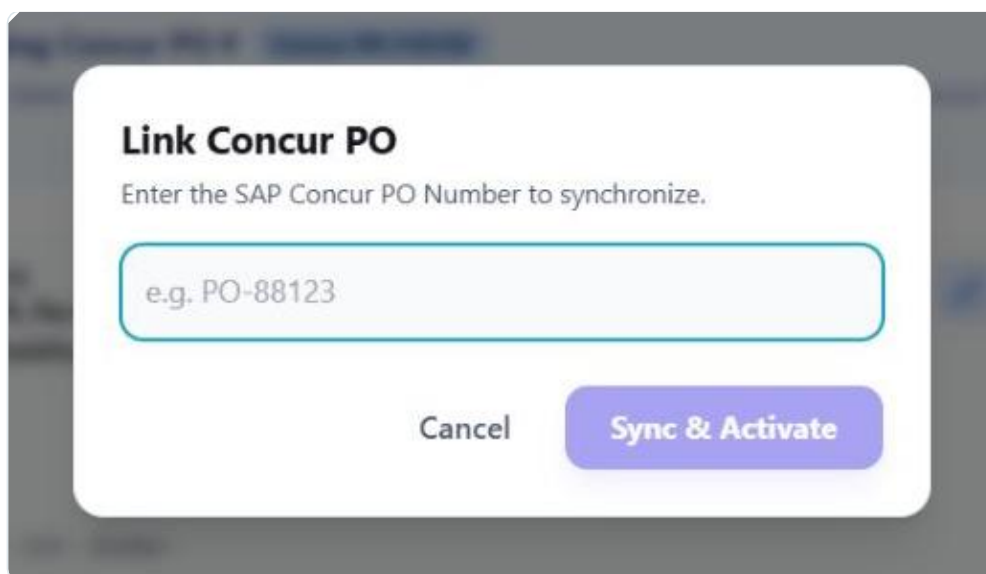

The request progresses to Pending Concur PO. The countdown requirement is satisfied because the PR is linked. Linking a reference records it in ProcureFlow; it does not create or approve a PR in Concur.

Moving the protected hold to an issued PO

The PO handover follows the protected PR stage. Record the issued PO so the request becomes Active and delivery can be tracked.

Where in the app

Request detail, awaiting PO → **Link Concur PO** → **Sync & Activate**.

Link Concur PO records the issued PO reference and offers **Sync & Activate**.

- 1 Confirm the protected reservation**
Check the Stock Reserved Awaiting Concur PO banner and the displayed PR reference.
- 2 Obtain the issued PO**
Confirm that the PO belongs to the same supplier and requirement. Use the real issued number.
- 3 Select Link Concur PO**
Enter the PO reference in the dialog.
- 4 Select Sync and Activate**
Use **Sync & Activate**, then verify the PO field and request status.
- 5 Track delivery**
The active order now needs actual receipts recorded against the delivered quantities. Record partial deliveries accurately and keep outstanding quantities visible.

Expected result

The request becomes Active and moves from a temporary reservation into an issued-order commitment. The PR reference remains on record. A PR-linked request does not lose its reservation just because the original 48 hours have elapsed.

Reservation checks

Use the saved reference and banner to confirm the handover.

Verify the deadline and reference

Confirm the approval time, the 48-hour deadline and the saved PR reference. Once linked, the PR protects the reservation while you follow up PO issuance.

What users should verify

1

After approval

The request moves to its Concur-entry stage and a countdown banner appears.

2

After PR entry

The correct **Concur Request #** is saved and the banner states stock is reserved awaiting the Concur PO.

3

After PO entry

The correct **Concur PO #** is saved, the status is Active and receipts can be tracked.

4

If the hold expires

Open the existing cancelled record. Link an existing real Concur reference or review stock and Re-Reserve; original approval remains on record.

How this affects stock

Approved holds reduce ProcureFlow's orderable balance. Applicable issued-order commitments are shown separately as quantities on order. These are internal calculations from imported supplier reports, rather than physical warehouse holds.

Quick check

Does the PR-linked hold expire because the PO takes longer than 48 hours? No. Follow PO issuance and link the real issued reference when available.
