

Review Recover Link PR

Reservation expiry and Re-Reserve

Recover an expired allocation on the existing approved request.

1

Review the original record

Check need and current stock

2

Recover the allocation

Retain the original approval

3

Complete the handover

Link the actual Concur reference

**Stock Reservation Cancelled** 48-Hour Window Lapsed

Stock reservation cancelled: Concur PO # was not entered within 48 hours of approval. Reserved supplier stock has been released. Stock can be re-reserved when ready.

Original approval remains valid on record. Recovery requires verified stock for the complete request. Re-reserving starts a fresh 48-hour window; linking the actual Concur PR protects the restored hold while its PO is awaited.

Cancelled at: 9/24/2026, 12:39:20 PM

[Enter Request #](#) [Re-Reserve Stock](#)

WHAT CHANGED / WHERE TO FIND IT / HOW TO USE IT

Discover the new feature, find it in the app and follow the associated workflow.

Reservation expiry and Re-Reserve

Recover an expired allocation on the existing approved request.

What is new

Unlinked holds can expire after 48 hours and release their stock allocation. Re-Reserve starts a fresh window on the same approved request, retaining the original approval.

Where you will encounter it

Request detail → **Stock Reservation Cancelled** banner → **Enter Request #** or **Re-Reserve Stock**.

How it fits your workflow

Check the cancellation reason → locate any real Concur reference → confirm the requirement and current stock → link the reference or Re-Reserve → verify the new stage and protected hold.

Section	Page
Understand expiry and release	3
Use Re-Reserve	4
Confirm recovery and the next handover	5

Key action

Every line must fit verified current stock. Insufficient stock blocks confirmation, and the server checks the whole request again before restoring the hold.

Automatic expiry and stock release

An unlinked reservation can now expire after 48 hours and release its allocation. The request remains available for recovery with its approval retained.

Where in the app

Expired request → request detail → **Stock Reservation Cancelled** banner.

The expired request shows the cancelled reservation, retained approval and recovery actions.

- 1 Read the cancellation reason**
Open the request marked **Stock Reservation Cancelled** and inspect its explanation.
- 2 Check whether Concur work already exists**
If a PR or PO was actually issued, locate the correct reference and link it to the original request using the available controls.
- 3 Otherwise reassess the requirement**
Confirm that the purchase is still needed, then inspect current stock before re-reserving.
- 4 Keep the original record**
Its original approval remains on record. Use the recovery actions instead of creating a duplicate just to restart the reservation.

Expected result

The released quantity no longer reduces the active reservation balance. The request history records the expiry. The cancellation label concerns the stock allocation; the original approval is retained.

The stock calculation excludes an expired hold when its time has elapsed. The status and notification are applied by the next expiry sweep, so the visible status may update shortly afterwards.

Re-Reserve on the original request

Re-Reserve provides a recovery path for an expired allocation without submitting the same requirement as a new request.

Where in the app

Cancelled request detail → **Re-Reserve Stock** → Re-Reserve **Supplier Stock** confirmation.

Re-Reserve Supplier Stock
Request: POR-202602-000032 • Supplier: Simba Global - Accommodation

Original Approval Maintained
This purchase request was approved on record by **Jo-Anne Davis**. Re-reserving will return the request to **Pending Concur Request** status and start a fresh **48-hour stock holding window** for linking the Concur Request / PR #.

LINE ITEMS & SUPPLIER STOCK VERIFICATION (3 ITEMS)

CLOTH - MICROFIBRE RED SKU: HCHR • Qty Requested: 5000 • Price: \$0.51	0 avail \$2,550.00
MICROFIBRE CLOTH - GREEN SKU: MCF6 • Qty Requested: 3000 • Price: \$0.51	0 avail \$1,530.00
CLOTH - MICROFIBRE BLUE SKU: HCHB • Qty Requested: 3000 • Price: \$0.51	0 avail \$1,530.00

Re-reservation is blocked: insufficient verified stock for the complete request. Shared supplier stock is checked across all lines and sites.

Order Subtotal (Ex GST): **\$5,610.00**

Cancel **Confirm Re-Reservation (48 Hours)**

The real confirmation screen shows original approval, line quantities and available stock.

- 1 Select Re Reserve Stock**
Open the cancelled request and choose **Re-Reserve Stock**.
- 2 Review every line**
Compare Qty Requested with the displayed available stock, and check the supplier and value.
- 3 Resolve any shortage**
Compare every requested line with current available stock. Resolve shortages or an unverified supplier baseline before confirming; the allocation cannot be restored until the complete request fits.
- 4 Confirm the allocation**
Choose **Confirm Re-Reservation 48 Hours**. The original approval is retained and a recovery event is added.
- 5 Link the Concur reference promptly**
Enter the actual PR or issued PO using the available request controls; verify the resulting banner and status.

Expected result

A fresh 48-hour expiry is created and the request returns to Pending Concur Request. Without a linked PR or PO, it can expire again.

Use Enter Request # after recovery to save the actual PR. Verify the saved reference and the protected hold awaiting PO.

Confirm recovery and the next handover

A fresh reservation needs the same timely Concur follow-up as the original one.

When stock is insufficient

The confirmation lists requested and available quantities. A shortage or missing verified baseline disables confirmation. Resolve the supply position and refresh before trying again.

Record the real Concur reference

- 1 If a PR already exists**
Use **Enter Request #** on the cancelled record to link that actual number and verify the updated banner.
- 2 If the PR is created after Re-Reserve**
Choose Enter Request #, save the actual Concur PR and verify the reference and protected banner.
- 3 If the issued PO exists**
Use **Link Concur PO** when available, enter the actual issued number and **Sync & Activate**. Confirm Active.
- 4 If you cannot see the required action**
Ask the purchasing lead or administrator for assistance appropriate to your role, ownership and current request status.

Avoid a duplicate requirement

Use the original request for recovery. Do not submit another request simply to restart the hold or enter an invented Concur number. A re-reserved request without a PR or PO can expire again.

Quick check

Does expiry remove the original approval? No. The stock allocation is released while the original approval is retained.

Current confirmation behaviour

The confirmation blocks stock shortages and unverified baselines. The server checks supplier-wide capacity for the complete request. A linked PR protects the hold beyond the original deadline.
