

Run Review Follow up

Stock reporting and reservation follow-up

See stock pressure and identify the requests that need action.

1

Run the report

Refresh balances and reservations

2

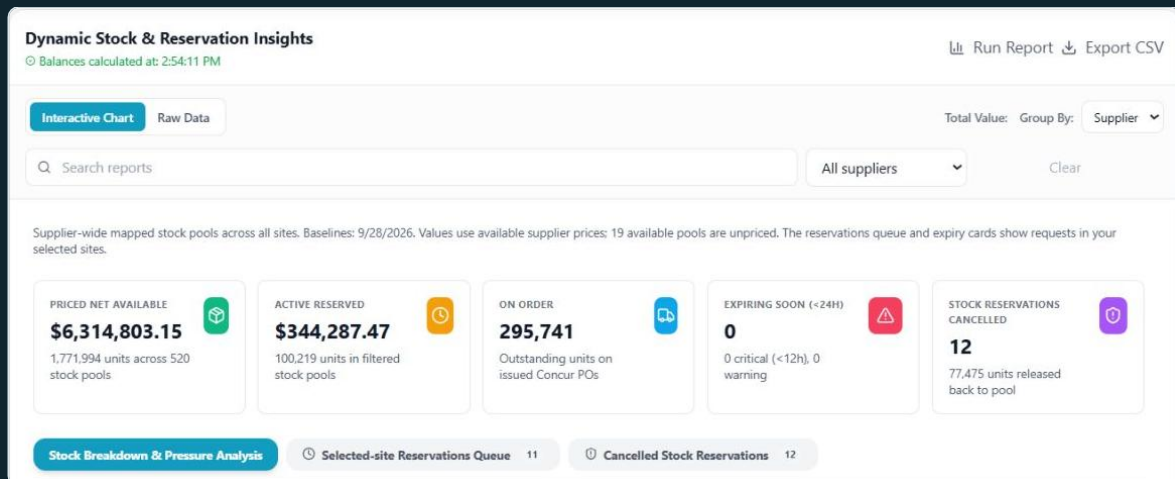

Prioritise the queue

Separate urgency from pressure

3

Follow up each request

Confirm the saved PR or PO

WHAT CHANGED / WHERE TO FIND IT / HOW TO USE IT

Discover the new feature, find it in the app and follow the associated workflow.

Stock reporting and reservation follow-up

See stock pressure and identify the requests that need action.

What is new

Dynamic Stock & Reservations combines net stock, approved holds, quantities on order, expiry and cancelled allocations. The reservation queue distinguishes timed holds from PR-protected requests awaiting PO.

Where you will encounter it

Reporting → Supplier Insights → Dynamic Stock & Reservations → Run Report. Use Stock Breakdown & Pressure Analysis or Selected-site Reservations Queue.

How it fits your workflow

Run the report → review balances and pressure → prioritise unlinked holds near expiry → **Open PO** → complete the real PR or PO handover → re-run to verify progress.

Section	Page
Run the stock and reservation report	3
Work the reservation queue	4
Interpret the report and prioritise follow-up	5

Key action

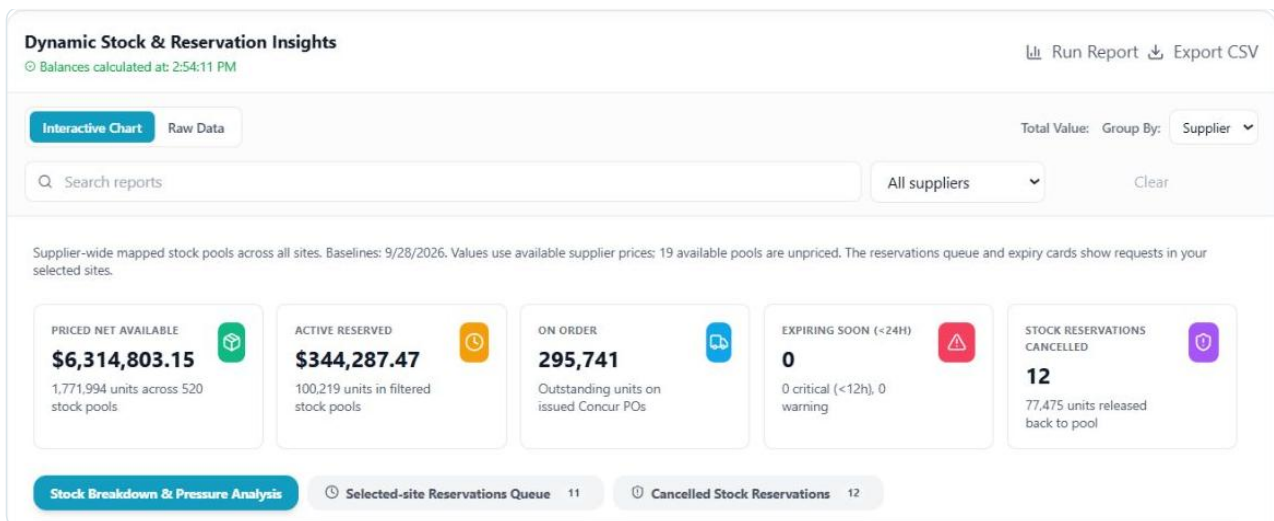

Use the request's saved reference and banner to confirm the next action. Stock pressure and countdown urgency measure different things.

Stock and reservation reporting

The new report brings net stock, active holds, quantities on order and cancelled allocations together so users with reporting access can review pressure and follow-up.

Where in the app

Reporting → Supplier Insights → **Dynamic Stock & Reservations** → **Run Report**.

The report controls and summary distinguish reservations from quantities on order.

1

Open Reporting

Choose **Dynamic Stock & Reservations** under Supplier Insights.

2

Select Run Report

Run Report refreshes current allocations. Check Balances calculated at and the supplier baseline dates. Re-run after significant changes.

3

Read the summary

Review net orderable units, reserved stock, quantities on order, expiring reservations and cancelled reservations.

4

Inspect pressure

Use **Stock Breakdown & Pressure Analysis** to identify products where reservations consume a large share of the reported stock.

5

Inspect or export details

Use Raw Data for supplier stock-pool details. Export CSV includes price basis and source issues. Available values exclude unpriced or varying-price pools; zero availability is marked Unavailable.

Expected result

Reserved units include timed and PR-protected holds. On Order includes all issued units not yet received. Supplier stock totals cover all sites; queue and expiry cards follow your selected sites.

Reservation queue and follow-up

The queue makes the outstanding handover visible: timed holds need a PR, while PR-protected holds need follow-up through PO issuance.

Where in the app

Dynamic Stock & Reservations → Selected-site Reservations Queue → Open PO.

POR-202610-000015	HOST Supplies	Julie Nguyen SPL Perth; Maddington	2,300	\$3,470.00	10/6/26, 1:35 PM	46h 23m left	Open PO
POR-202610-000016	Simba Global - Accommodation	Julie Nguyen SPL Perth; Belmont	11,005	\$15,290.70	10/6/26, 1:37 PM	46h 24m left	Open PO
POR-202610-000014	Simba Global - Accommodation	Julie Nguyen SPL Perth; Maddington	18,144	\$53,507.92	10/6/26, 2:43 PM	47h 30m left	Open PO
POR-202610-000017	HOST Supplies	Thuy Kim Ngoc Giang SPL Melbourne	600	\$450.00	10/6/26, 1:30 PM	Concur PR #10185	Open PO
POR-202610-000013	NCC Apparel Pty Ltd	Thuy Kim Ngoc Giang SPL Melbourne	3,050	\$13,546.20	10/6/26, 5:17 AM	Concur PR #10175	Open PO

The queue includes both a timed request and a PR-protected request.

- Open the queue tab**
Select Selected-site Reservations Queue.
- Filter by urgency**
Use Critical, Warning or All. Read the displayed reference as well as the time-remaining column.
- Open the request**
Select **Open PO** for the relevant row; confirm the supplier, requester and site.
- Take the correct action**
For an unlinked request, create and link the PR. For a PR-linked request, follow Concur PO issuance. For a cancelled reservation, review and recover the allocation if still needed.
- Confirm completion**
Re-run the report after the update and check that the row now reflects the linked reference or changed status.

Daily review habit

Check urgent unlinked reservations, review high-pressure products, follow PR-linked requests awaiting a PO, and assign follow-up for cancelled allocations. Stock pressure measures product availability; countdown urgency measures time remaining.

Interpret the report and prioritise follow-up

Work from the freshest report and confirm the request itself before progressing it.

Measure or stage	Interpretation	Next action
Net available / orderable	Remaining stock after applicable allocations and pack rules.	Inspect the product before raising more demand.
Active reserved stock	Approved holds awaiting Concur PO issuance, including PR-protected holds.	Separate unlinked countdowns from PR-linked requests.
On Order	Issued PO quantities not yet received. On Order does not confirm that the supplier has dispatched them.	Follow delivery and record actual receipts.
Expiring soon	Unlinked holds near the 48-hour deadline.	Prioritise PR creation and linking.
Cancelled reservations	Released allocations with retained approval.	Confirm need and recover the original request if required.

Choose the next follow-up action

An unlinked hold needs its actual PR created and linked. A PR-linked hold needs PO follow-up. A cancelled allocation needs review and recovery if still required. Check the saved request before acting.

Daily review sequence

Start with critical unlinked holds below 12 hours, then warning-tier holds below 24 hours. Review stock pressure, PR-linked requests awaiting PO and cancelled allocations needing recovery. Assign an owner and re-run the report after a material change. Use **Raw Data** or **Export CSV** for a working list within normal company channels.
